

### Listing Of Claims

This listing of claims will replace all prior versions and listings of claims in the Application.

1. (Original) An apparatus for delivering medicine to one or more tissues, the apparatus comprising:  
a mask adapted to be worn around one or more tissues, the mask further comprising one or more fog outlets proximate to one or more tissues; and  
one or more atomizers to atomize medicine into a medicine-carrying fog, wherein one or more atomizers are in fluid communication with one or more fog outlets such that the fog discharges from one or more fog outlets to deliver medicine carried by the fog to one or more tissues.
2. (Original) The apparatus of claim 1, wherein one or more atomizers comprise an ultrasonic atomizer.
3. (Original) The apparatus of claim 1, wherein one or more atomizers comprise a nozzle.
4. (Original) The apparatus of claim 1, wherein one or more atomizers comprise a nebulizer.
5. (Original) The apparatus of claim 1, wherein one or more atomizers comprise a stirrer.
6. (Original) The apparatus of claim 1, wherein one or more atomizers further comprise one or more medication chambers.
7. (Original) The apparatus of claim 1, further comprising one or more conduits in fluid communication with one or more atomizers and one or more fog outlets.
8. (Original) The apparatus of claim 1, wherein the fog comprises liquid droplets in the size range of approximately 3 to 5 microns in diameter.
9. (Original) The apparatus of claim 1, further comprising one or more propellant sources in fluid communication with one or more atomizers to propel the fog to one or more fog outlets.

10. (Original) The apparatus of claim 9, wherein one or more propellant sources comprise a compressed gas canister and the gas compressed in one or more of the canisters is selected from the group consisting of air, nitrogen or carbon dioxide.

11. (Original) The apparatus of claim 9, wherein one or more propellant sources comprise a pump.

12. (Original) The apparatus of claim 1, further comprising one or more power supplies connected to one or more atomizers.

13. (Original) The apparatus of claim 12, wherein one or more power supplies comprise one or more batteries.

14. (Original) The apparatus of claim 12, wherein one or more power supplies comprise one or more electric wall outlets.

15. (Original) An apparatus for delivering medicine to one or more eyes, the apparatus comprising:

a mask adapted to be worn around one or more eyes, the mask further comprising a substantially transparent mask face and one or more fog outlets proximate to one or more eyes;

one or more atomizers to atomize medicine into a medicine-carrying fog, one or more atomizers further comprising one or more medication chambers to contain one or more medicines;

a power supply to supply power to the atomizer; a propellant source in fluid communication with the atomizer and one or more fog outlets; and one or more conduits in fluid communication with the atomizer and with one or more fog outlets such that the fog may pass from the atomizer through one or more conduits to the mask and be discharged from one or more fog outlets to deliver medicine carried by the fog to at least one eye.

16. (Original) The apparatus of claim 15, wherein one or more conduits comprise one or more flexible conduits.

17. (Original) The apparatus of claim 15, wherein the power supply comprises a battery.

18. (Original) The apparatus of claim 15, wherein the fog comprises liquid droplets in the size range of approximately 3 to 5 microns in diameter.

19. (Withdrawn) A method for administering one or more medications to one or more tissues, the method comprising:

nebulizing one or more medications to form a medication fog; and  
contacting the medication fog with one or more tissues at low fog pressure and high fog volume.

20. (Withdrawn) The method of claim 19, wherein one or more of the tissues comprises one or more eyes, the method further comprising:

containing the medication fog near one or more eyes and viewing an image with one or more eyes during medication administration.

21. (New) An apparatus for delivering medicine to one or more tissues, the apparatus comprising:

a device for delivering medicine adapted to be worn around one or more tissues, the device further comprising one or more fog outlets proximate to one or more tissues; and  
one or more atomizers to atomize medicine into a medicine-carrying fog, wherein one or more atomizers are in fluid communication with one or more fog outlets such that the fog discharges from one or more fog outlets to deliver medicine carried by the fog to one or more tissues.

22. (New) The apparatus of claim 21, wherein one or more atomizers comprise one of the group selected from an ultrasonic atomizer, nozzle, nebulizer, stirrer, one or more medication chambers, and combinations thereof.

23. (New) The apparatus of claim 21, further comprising one or more conduits in fluid communication with one or more atomizers and one or more fog outlets.

24. (New) The apparatus of claim 21, wherein the fog comprises liquid droplets in the size range of at least about 3 to 5 microns in diameter.

25. (New) The apparatus of claim 21, further comprising one or more propellant sources in fluid communication with one or more atomizers to propel the fog to one or more fog outlets.

26. (New) The apparatus of claim 25, wherein one or more propellant sources comprise one or more canisters of compressed gas and the compressed gas is selected from the group consisting of air, nitrogen, carbon dioxide, and combinations thereof.

Application No. 10/060,754  
Amendment dated October 6, 2004  
Reply to Office Action dated November 8, 2004

27. (New) The apparatus of claim 21, wherein one or more propellant sources comprise a pump.

28. (New) The apparatus of claim 21, further comprising one or more power supplies connected to one or more atomizers.

29. (New) The apparatus of claim 28, wherein one or more power supplies is selected from the group consisting of one or more batteries, one or more electric wall outlets, and combinations thereof.
